

**(Q1) (01) RELATIONSHIP BETWEEN USER AND ACADEMIC BOOK:**

User can reserve many books but if the required book isn't available no reservations.  
A particular book may be reserved by many or not.

**(02) RELATIONSHIP BETWEEN LIBRARYUSER AND COPY:**

User may not burrow a copy or may burrow many copies.  
At an instance a copy can, be burrowed by 1 or no user.

**(01) RELATIONSHIP BETWEEN ACADEMIC BOOK AND COPY:**

An academic book can have many copies or copies may be finished.  
A particular copy can be of one particular book.

**(02) RELATIONSHIP BETWEEN ACADEMIC JOURNAL AND ARTICLE:**

An academic journal can have 1 or many articles.  
A particular article can be of one particular academic journal.

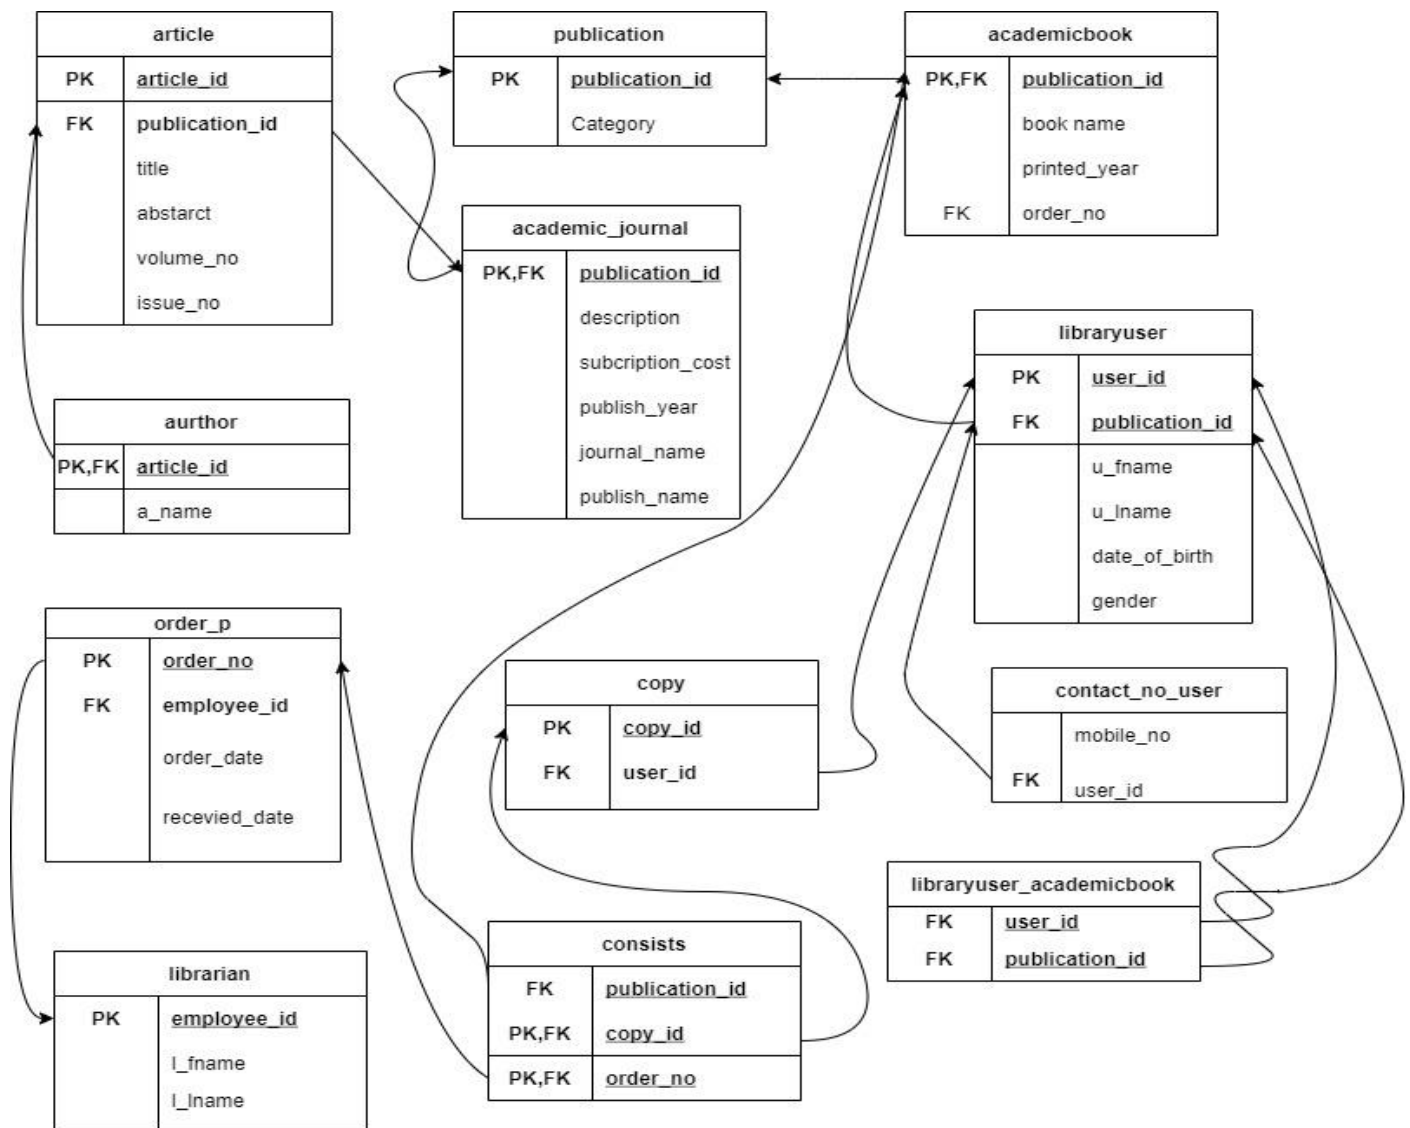

**(03) RELATIONSHIP BETWEEN LIBRARIAN AND ORDER:**

A librarian will not order books (if required number of copies available) or will order many books as required.  
A particular order will be made by a particular librarian.

**(04) RELATIONSHIP BETWEEN ORDER, ACADEMIC BOOK, COPY:**

This is a ternary relationship.  
An order may contain 1 or many, academic book or copy.

**(05) GENERALIZATION CONCEPT used is Optional, OR – The library may contain publications except Academic Books and Academic Journals such as children's books, novels**

## (Q2)

- (1) library user and Academic book relationship is a many to many relationship therefore another relation named libraryuser\_academicbook is created. Primary keys of libraryuser and Academic book are placed as foreign keys.
- (2) A new relation is created named 'consists' because order, copy, academic\_book is a ternary relationship.
- (3) Contact no is a multivalued attribute therefore a new relation is created named 'contact\_no\_user' with foreign key user\_id.
- (4) Article relation is in unnormalised form due to author name(a\_name) being multivalued. Therefore a new relation is created named 'Aurthor' with article\_id as foreign key.
- (5) Since Optional, OR generalization concept is used Primary key of Publication relation is given to Academic Journal and Academic book relations as foreign keys.
- (6) Librarian and Order\_P are in one-to-many relationship therefore employee\_id is placed in order\_p as a foreign key.
- (7) Academic Journal and Article are in one-to-many relationship therefore publication\_id is placed in article as a foreign key.
- (8) Library\_user and Copy are in one-to-many relationship therefore user\_id is placed in Copy as a foreign key.
